Education

Bachelor's of Science in Computing and Information Science
B. Thomas Golisano College of Computing and Information Science
Rochester Institute of Technology in Rochester, NY

Skills

React.js/React Native
TypeScript/JavaScript/Node.js
HTML5/CSS3
Sass/LESS/SCSS
Adobe Creative Suite
Webpack/Gulp/Grunt
ORM
C#/.NET
ReasonML

Employment Summary

EF Education First, EF Go Ahead Tours June 14th, 2017 - Present

Software Engineer
I worked on a team to deploy an eCommerce website powered by StoryBlok CMS built with Next.js, React.js, GraphQL, and Emotion to drive an increase in sales and reduce bounce rates while empowering stakeholders to make changes without the assistance of the development team. I also assisted a sister company's development team in deploying their website with a similar stack and value add.

Software Developer
I worked on a team that transitioned from a monolithic data system to an architecture that leveraged the Onion architecture model with microservices developed in C#. This team also worked to create a shared component library with React.js and TypeScript and distributed it as an npm package that came bundled with a living style guide. The finished product included unit and integration testing and incorporated Agile methodologies to complete work. I also implemented and deployed a server that mapped legacy API's to GraphQL to be consumed by multiple applications. The stack included an ORM built with Sequelize merged with GraphQL query data on top of a PostgreSQL database consumed by a SSR React.js app built with TypeScript, Next.js, and styled-components using Emotion. I also mentored three interns in the creation of an internal tool for the marketing division to create their own static pages and a blog using CockpitCMS data piped through our GraphQL facade.

SapientRazorfish September 14th, 2015 - June 9th, 2017

Interactive Developer L1
I worked in a team of developers, designers, project managers, and clients developing a multitude of rich web applications utilizing PHP, Node.js, and various JavaScript frameworks such as React.js while leveraging REST API's and GraphQL. I also assisted in scrum planning, sprint planning, and scaffolding development and production environments.

UEstate June 2nd, 2014 - August 22nd, 2014

Chief Technology Officer
I assisted within a start up business that dealt with online real estate. I facilitated the division of work and oversaw the development of their website while also actively participating with development.
